Education

Sir M Visvesvaraya Institute of Technology

Bachelor of Engineering - Computer Science and Engineering (2023)

Bengaluru, India

CGPA: 9.5

Experience

Goldman Sachs , Bengaluru | September 2025 - Present

Software Engineer

- Designed and built a configurable Reconciliation Framework using **Java** , **Apache Spark** and **Spring Boot** to compare datasets across heterogeneous table schemas via a dynamic attribute mapper - detecting missing records, value mismatches, and anomalies across **200 million active financial records**, normalising data and surfacing quality metrics on an internal dashboard.
- Engineered a high-throughput data backfill pipeline using **Java** and **Apache Spark** to ingest and process **16 billion+** historical records from **HBase**, flattening nested records and writing optimised Parquet files to **HDFS** for downstream consumption.
- Architected an end-to-end data load workflow: Parquet files on HDFS are ingested into **Snowflake** via GS internal **Lakehouse**, enabling structured analytics and metrics reporting across financial systems.
- Defined **Snowflake** table schemas using Bi-Temporal Milestoning — maintaining both transaction time and valid time — to preserve full audit history of open and closed records, ensuring compliance with financial data lineage and regulatory requirements.

Nokia Solutions and Networks , Bengaluru | August 2023 - September 2025

Associate Software Engineer

- Engineered backend logic using **Spring Boot** to build and maintain **REST APIs** for managing the network test lifecycle in Network Services Platform (NSP) overseeing 45,000+ routers .
- Designed and structured database schemas based on **YANG** models to support efficient test data storage in **PostgreSQL**.
- Developed several internal tools using **React**, **HTML** and **JavaScript**, which enhanced team productivity by 20%, improving workflow automation and reducing manual efforts.
- Demonstrated a Proof of Concept (POC) for a unified intent model, reducing test implementation time by 40%-45%, improving multi-vendor test deployment, and enabling off-cycle deliverables.
- Developed and enhanced network management software(NFM-P) for Nokia routers to optimize router configurations.
- Deployed 5+ new GUI features using **XML** and **Java**, improving user interface efficiency and reducing time spent by users on configuration by 15%.

Skills

Languages	C++, Java, SQL, JavaScript
Frameworks	React.js, Spring Boot, Apache Spark, Redux
Databases	PostgreSQL, MongoDB, MySQL , Hbase , HDFS ,Snowflake
DevOps & Tools	Kubernetes, Docker, Kafka, Openstack, Linux, Git, Junit
Subjects	System design, Operating Systems, Data Structures and Algorithms, DBMS, Object oriented programming, Computer Networks

Projects

Real-time Canva — A realtime drawing board

Technologies: **Socket.io**, **React.js**, **Redux**, **Hooks**, **Node.js**

- Developed a real-time drawing board website where users can collaborate by sharing URLs.
- Utilized Socket.io for bidirectional communication between client and server.

Github: [click here](#)

Chrome Web Extension — Freelance Project for ClickUp

Technologies: **Chrome Extension API** , **HTML** , **CSS** , **Javascript**.

- Built a Chrome extension to enhance productivity by managing hyperlinks in ClickUp documents.
- Implemented OAuth 2.0 for secure user authentication and integrated the ClickUp API for managing user documents.

Achievements and Certifications

- Awarded **Business Excellence Award** with cash prize at Nokia
- Global Rank 9** in *Codechef June Long 2022*, Division 3
- Global Rank 24** in *Codechef April Long 2022*, Division 4
- 300+ problems solved on LeetCode
